Education

Master of Science, Computer Science | Indiana University Bloomington | GPA: 3.8/4.0 — Aug 2024 – May 2026

Bachelor of Engg., Computer Science | Savitribai Phule Pune University | GPA: 3.6/4.0 — July 2021 – June 2024

Experience

Software Engineer (Contract) | Korrus — Aug 2026 – Present

- Built a read-only audit system in Python over 6 business systems (NetSuite, HubSpot, Shopify, Stripe, Avalara, Arena PLM), turning exploratory Claude Code passes into 25 deterministic YAML-defined checks that run unattended each week over dated API snapshots
- Surfaced defects confirmed in writing by the teams that own the data, including a customer master that was 69% duplicate and a silent CRM sync failure that let IT recover 45 stalled opportunities worth $437K
- Owned data mapping for an acquired company's Macola and Salesforce migration to NetSuite at the CEO's request, mapping 145 Salesforce fields and building an item-matching tool that IT adopted over its own to match 604 items

Research Assistant, Agentic AI Security | DSAIL Lab, Indiana University Bloomington — Mar 2026 – Aug 2026

- Benchmarked **11** agent-skill security scanners head-to-head, finding **0.15%** cross-scanner agreement and silent-failure modes that invalidated **92%** of one scanner's reported output
- Engineered a resumable SLURM array pipeline on IU's HPC cluster that ran **8** scan runs across **10K** packages and scaled to a **265K**-skill evaluation corpus

Software Engineer (Graduate Assistant) | Indiana University Bloomington — May 2025 – May 2026

- Shipped a live AI chatbot on the Indiana University website that answers thousands of student queries per day across **70+** colleges and departments, cutting Graduate School office walk-ins by **60%**
- Architected it as an A2A multi-agent system on Azure LLM and Azure Kubernetes Service; a routing agent classifies each query and delegates to department agents that fetch live data through an MCP server, returning out-of-scope questions to the right contact
- Migrated **13** legacy university applications onto shared PHP abstraction layers over XML schemas, verifying each migration with automated record-count checks across all affected data

Software Engineer | TriFrnd (Govt. of Maharashtra, India) — Sep 2023 – Jun 2024

- Led the state teacher-training registration portal on Next.js, Node.js, and PostgreSQL, with a stateless API layer serving **550,000+** registered teachers across **35** districts
- Wrote a Node.js batch allocation engine that assigns teachers across **960** training batches, replacing a fully manual coordination process with real-time dashboards and audit trails
- Implemented role-based access control across **three permission tiers** and gated all **35** district rollouts behind Jest integration tests

Projects

Invoice Processing Automation | *Python, TypeScript, React, FastAPI, LangGraph* — GitHub

- Kept payment authorization in deterministic Python covered by **56 offline tests**, confining the LLM to extraction and a tool-called fraud check so no model response could release funds on its own
- Created a LangGraph pipeline that parses invoices in **5** formats into Pydantic contracts checked at every step, validates totals against inventory, and runs a capped reflection loop that escalates borderline approvals to human review

AI Course Planning Platform | *Python, React, FastAPI, LangChain* — GitHub

- Developed a recommendation engine over **42** courses on LangChain and the OpenAI API that validates every LLM plan server-side, with a deterministic fallback that ranks by prerequisites, credit load, and interests when the API is unavailable
- Delivered a React drag-and-drop multi-semester planner with in-browser prerequisite checks, and wrote an offline eval over **24** student profiles that counts prerequisite violations in generated plans

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, PHP, C++
Backend & Frontend: FastAPI, Node.js, Express.js, Next.js, React, REST APIs, Redis
Databases: PostgreSQL, MySQL, MongoDB, SQLite
AI & LLM: Claude Code, tool-calling, MCP, A2A, LangGraph, LangChain, OpenAI API, Azure LLM, Pydantic, LLM evals, spaCy, NLTK
Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Git, Linux, pytest, Jest
Data & Integrations: PySpark, NetSuite (SuiteQL), HubSpot API, Stripe API, Shopify API

Publications

Multilingual Evaluation of Semantic Textual Relatedness (SemEval-2024), ACL Anthology 2024 — *First Author*
L3Cube-IndicNews: News-based Short Text and Document Classification in Indic Languages, ACL Anthology 2023 — *Co-Author*
